

PRODUCT CHAMPION

Oxford ESP Gauge

TRAINING COURSE

Overview

The OMS Product Champion training course offers end users the opportunity to learn about the advanced downhole ESP gauge system from Oxford Monitoring Solutions.

In attending, users will not only get an insight into the system, its components, and best practice installation / commissioning, but they will also benefit from an in depth understanding of how the gauge system operates in order to effectively troubleshoot the system should the need arise. This in-house expertise becomes invaluable when ESP uptime is critical.

Further, the course enables end users to release the full potential of the Oxford Monitoring System in protecting Electrical Submersible Pumping Systems and optimizing ESP performance.

The course combines classroom-based training with practical assignments and is suitable for field service engineers, technicians and application engineers with an understanding of ESP systems.

Course Topics

- Troubleshooting downhole and at surface
- Config manager
- Surface equipment configuration and integration
- Deployment
- Inspection & testing
- Tooling & equipment
- Product overview and familiarization

Course Duration

- 3 Days

Attendance Requirements

- ESP Field Service Technician/Engineer level
- Fluent in English
